Child sexual abuse continues to be a pervasive, systemic issue. It doesn’t discriminate by culture, class, ethnicity, age, or gender, and is found everywhere from homes to schools to trusted organizations and institutions.

A Conversation Can Make All the Difference

Child abuse thrives on silence, and normalizing these conversations helps bring the issue out of the shadows. Research shows that talking to your kids about sexual abuse, touching, and private body parts can help keep them safe. Have the talk.
